Cockroach Preparation (Residual and gel)

Preparation Procedures

This technique incorporates traditional chemical application.

It will be necessary for you to stay out of your suite for approximately 4-6 hours after the technician arrives, if anyone is pregnant, with respiratory problems or under the age of 2, 24 hours is recommended.

Occupants are required to empty top and bottom cupboards in the kitchen and bathroom, remove old shelf paper and keep counter tops clear.

Clear all top shelves and floors of closets. Please remember the linen closets and make sure all baseboards are accessible.

Remove any pets from suite.

Maxforce bait and dust application would be applied in your kitchen and bathroom cupboard, a spray application will also be applied in cracks and crevices along the baseboard to address activity that was inaccessible.

A follow-up gel treatment will take place 2 weeks after the initial service.

AFTER THE TREATMENT

More Activities is to be expected because the Gel will attract all the insect, that are present, to go and feed for a period of time.

HOUSEKEEPING IS THE FIRST STEP FOR ANY KIND OF PEST PROBLEM.DO NOT USE STRONG DETERGENT OR ANY CHEMICAL AFTER THE APPLICATION AS IT WILL AFFECT THE ATTRACTANT INSIDE BAIT
