Bedbug Preparation

Preparation Procedures

All clothing and all bedding (sheets, pillowcases, comforters, blankets, etc.) must be removed from the bed, washed, dried at high temperature, put into sealed plastic bags and placed in the bathroom (bathtub) or the kitchen.

Do not move all furniture (dressers, chests and nightstands). However, you must empty all of its contents, seal into plastic bags and remove from the infested room (bathroom or kitchen). All closets must be emptied as well.

Place in plastic bags all other objects (books, remote control, watches, jewelry, toys, etc).

Place mattress standing up against the wall.

If there are any holes in the walls, they must be made visible so the technician will be able to treat these areas.

All person and animals must remain out for 5 to 6 hours after the treatment. If there is a pregnancy, a child under the age of 2 or respiratory problem or allergic sensitivities, we recommend 24 hours.

After Treatment

Bed bugs can still be active. They can be hidden inside the walls and can return to feed within 4 to 18 days after the treatment.

It is therefore essential that people sleep in the infested room to attract the bedbugs, so they can be contaminated by residual insecticide.

What not to do

Do not vacuum or clean in between treatments. This will affect the residue.
